Top Layer **Bamboo**

Bamboo is a fantastic solution for sustainability. Bamboo is growing very fast. The 4-5 year old adult strains are yearly harvested. As a result, the young stems will grow even faster and there will never be deforestation as with hardwood. As a result, bamboo also makes a major contribution to capturing CO₂ - the MOSO bamboo top layer is itself officially CO₂ neutral over the entire life cycle (TU Delft - INBAR report). In addition, there is a new process in which bamboo is compressed under high pressure: MOSO High Density[®]. This results in a very durable and extremely hard end product: 2x as strong and durable as oak. Because of this new way of producing, the bamboo also has a completely different structure, similar to that of tropical hardwood. This gives a bamboo floor a much more upscale appearance.

Huiya processes this High Density[®] bamboo on the floor panels. This achieves a beautiful and solid end result that, thanks to its abrasion resistance, lasts for many years without any problems, and because of its high wear resistance and low environmental impact.

impact contributes to a higher BREEAM NL score (contact us for more details). PBS has chosen MOSO International as the partner with the most experience and the highest quality guarantees.

PBS and MOSO together supply this floor panel. With this system you get total guarantee on your raised floor. This takes full responsibility for the delivered products and the way in which they are assembled. With this product you buy a complete raised floor (including top layer) without risks.

PRODUCTS

TOP LAYER

The bamboo top layer is factory applied to the panel. To the sides, an ABS edging band is applied that completely locks the top layer and the panel. This increases the removability and protects the panel and the top layer during repositioning. PBS processes this high-density bamboo on the floor panels. This achieves a beautiful and solid end result that, thanks to its wear resistance, lasts for many years without any problem.

In addition, we give the lace band the chosen bamboo color. This way you get a nice and durable raised floor. When you choose a wooden panel, the raised floor comes with the FSC quality mark.

Finish Panel Calcium sulphate

Finish Panel Particleboard

Finish Colors

Bamboo can be provided with a lacquer layer or a oil layer. Each finish has its own specific advantages and disadvantages. We are happy to inform you about this!

Finish Lace band

For the edge band a color chosen that matches the chosen color of the top layer.
