# CHIPBOARD PANEL, PVC&RUBBER

HUIYA accepts no liability whatsoever for any direct or indirect damage, from any kind, arising from the information on this product sheet

Durable, strong and colorful variations combined with easily removable tiles.

### Finish Panel

The top layer is applied to the panel on a factory basis. On the sides is a ABS or PVC edging tape that fully encloses the top layer and the panel. This increases the removability and protected the panel and the top layer during repositioning.

### Top layer Linoleum, PVC and rubber, factory applied

A raised floor panel can be provided with a hard top layer in the form of linoleum, PVC or rubber. This top layer is manufactured together with the panel. Almost every top layer can be processed on a HUIYA panel; the diversity is therefore great. The advantage of this approach is that the panels are easy remain removable and available in almost any color.

- Top layer 01.
- ABS or PVC edge band 02.
