# COMPOSITE TILES AND NATURAL STONE

HUIYA accepts no liability whatsoever for any direct or indirect damage, from any kind, arising from the information on this product sheet

A fantastic top layer with maximum flexibility!

### Top layer

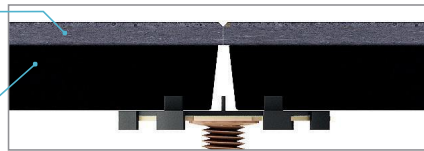

## Composite tiles and natural stone

Both natural stone and composite tiles give a beautiful look to your Office and House. Huiya can apply these top layers to the panels of different selected manufacturers and install them as a raised floor. That gives a fantastic end result! The panels are made slightly smaller than 600 mm x 600 mm, over which the top layer is applied. Through the faceted edge of the top layer makes the panels easily removable. This wear-resistant and beautiful solution offers a beautiful finish, combined with the practical advantages of a raised floor.

### Finish Panel

The thickness varies between 6 and 15 mm

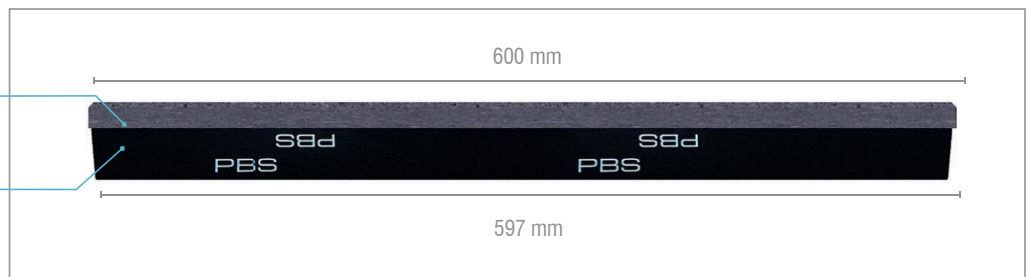

The thickness varies between the 25 and 35 mm

The composite and the natural stone tiles are made with the utmost produced low tolerances. As a result, the top layers can be laid directly against each other without it disturbing seam formation. Due to the applied facet edge a simple removability is maintained and the tiles can also be easily and safely returned.

Composite or natural stone with facet edge 01.

Carrier calcium sulphate 02.

The thickness of the top layer is manufacturer dependent and varies between 6 mm and 15 mm. The thickness of the calcium sulphate support is adjusted
